

Cross-Calibration and Coordinated Data Products

Starting the conversation on cross team efforts:

- On-ground cross-calibration
- On-orbit cross-calibration
 - Which team members will be involved?
 - Timelines (3-6 months?)
- What coordinated data products should be produced?
 - Combined electron spectrum (ECT)
 - Combined composition spectra (HOPE & RBSPICE)
 - Density (EMFISIS, EFW, HOPE)
 - Low frequency waves (EFW, EMFISIS)
 - Et cetera
- Planning
 - Where/when shall these data products be produced?
 - Where will they be hosted?
